**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9, 11-13, 15, 16, 18, 19, 21-23, 27, 28, 30, and 31, drawn to **"an active matrix display apparatus"**, classified in class 345, subclass 76.
  - II. Claims 10, 14, 17, 20, 24, 29, and 32, drawn to **"a method of inspecting each display element of an active matrix display"**, classified in class 445, subclass 3.
2. Inventions **Group I** and **Group II** are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because **Group I is "a third transistor that has a source and a drain connected to the electrode and a gate signal line for a display element other than said display element, and that has a gate controlled such that current flowing from the first transistor to the electrode is led to the gate signal line for the other display element"**. The subcombination has separate utility such as **"controlling the gate of the third transistor by changing a potential of a first line for a display element other than the display element to be inspected; and measuring an amount of charge or**

**current flowing from the electrode via the third transistor by using a measuring unit connected to the first current-source line for the display element to be inspected".**

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Claim 25 link(s) inventions **Group I** and **Group II**. The restriction requirement claim 25 the linked inventions is **subject to** the nonallowance of the linking claim(s), claims 10, 14, 17, 20, 24, 29, and 32. Upon the indication of allowability of the linking claim(s), the restriction requirement as to the linked inventions **shall** be withdrawn and any claim(s) depending from or otherwise requiring all the limitations of the allowable linking claim(s) will be rejoined and fully examined for patentability in accordance with 37 CFR 1.104 **Claims that require all the limitations of an allowable linking claim** will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are

governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

Applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, the allowable linking claim, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.
